P R E F A C E

This publication is a combined summary of Florida, Alabama, and North Carolina potato marketing for the 1970 season.

The Federal-State Market News Service began collecting shipping point information and issuing daily f.o.b. market reports for the 1970 potato season at Belle Glade, Florida December 29; Florida City, Florida March 9; Hastings, Florida April 27; Foley, Alabama May 20; Elizabeth City, North Carolina June 15 and North East Alabama June 30. This summary was prepared from information compiled by Federal-State Market News Service Offices at those reporting points.

REVIEW OF THE 1970 LAKE OKEECHOBEE - FORT MYERS SECTION, FLORIDA POTATO SEASON

G. F. Pittman - Local Representative

The Statistical Reporting Service estimated the 1970 planted acreage at 1,000 for the Lake Okeechobee Area, and 2,200 for Fort Myers. This was less than the 1969 season, when the "Lake" planted 1,140 acres, and Fort Myers 2,660. Practically all of the potatoes grown this season in the Lake Okeechobee Area were "Reds", while only about one-third of the Fort Myers crop was Reds. The majority of their crop was "Round Whites", primarily under contract to chipping firms.

Growing conditions for the winter and early spring crops were favorable. The freeze on January 9-11 did not damage the crop on Lake Okeechobee, since the tops had already been killed by chemicals. The crop at Fort Myers suffered some burn. The "Reds" made almost a normal crop, while the young "Whites" showed a reduction in yields. The heavy rains in March damaged the "Whites" at Fort Myers.

Harvesting on Lake Okeechobee began on December 29. Supplies remained light on the entire season due to the small planted acreage. Harvesting of the winter crop was completed on February 16. A total of 170*carlot equivalents were moved from the "Lake" during the winter. A small acreage of late spring "Reds" were grown on the lake. This crop began harvesting on May 4, and was completed in a couple of weeks. The Fort Myers Section began harvesting their winter crop on January 26, and finished "Reds" the first week of March. Harvesting of "Whites" was not completed until the latter part of April. *Does not include Chipstock.

Prices on the "Lake" for fifty pound sacks of U.S. One, Size A Reds, ranged from $2.50-4.00 during the season. The price held around $3.00 f.o.b. the majority of the time when supplies were heaviest. The price at Fort Myers was higher after the harvest was completed on the "Lake".

There was no marketing agreement for potatoes this season. Little, or no change, was noted in packaging or variety grown. The main package is a 50 pound paper or burlap sack. Red LaSoda was the most popular variety.

******

REVIEW OF THE 1970 DADE COUNTY FLORIDA POTATO SEASON

J. P. Capus - Local Representative

Production in South Florida comes under the "winter crop" classification, according to the Crop Reporting Board. Major portion is in Dade County, the remainder mostly in the Lake Okeechobee-Fort Myers Section.

Total acreage for harvest of winter potatoes for 1970 was 10,300 acres. This was 700 below 1969, 1,100 below 1968, and the lowest since 1965.

Yield was 155 cwt. per acre, 25 cwt., or almost 14 percent below 1969, and the lowest since 1965. This was due to adverse weather conditions.

With lower acreage and yield, production in 1970 was 1,597,000 cwt - 383,000 cwt, or over 19 percent below 1969, and the lowest since the 1966 crop.

Plantings for this area for the 1970 harvest totaled 7,765 acres. This was 635 acres below the previous season, but 115 above 1968. Close to 2,000 acres of the total were White skin varieties, the remainder Round Reds.

Weather: Principal adverse weather was freezing temperatures, and strong winds on the mornings of January 8, 9, 10, and 11. This caused some damage and set-back to the crop. In the first week of February strong winds caused further damage to foliage, twisting of stems and breaking off of many limbs. The result of adverse weather was small tubers and light yields in the early stages of the season.

Start of the shipping season was a little later than usual, and it extended from March 9 through April 30 - a total of eight weeks, although there were a few shipments prior to, and after these dates. Movement in the early part of the season was light on account of weather damage to the crop in January and early February.

Total shipments for all potatoes, for all purposes, to all destinations was about 2,350 cars and carlot equivalents (50,000 lbs. each). This is according to growers and shippers end-of-the-season reports. The 1970 volume was almost 600 carlots, or 20 percent below the revised estimate for 1969.

Shipments of "Reds" vs. "Whites": The ratio was almost three bags of "Reds" to one of "Whites". Of total shipments of 2,350 carlots, about 1,725 or 73 percent were "Reds", the remainder - about 27 percent or 625 carlots were "Whites".

J. P. Capus - Local Representative

Table vs. Processing Movement: The ratio was almost six to four. Of total shipments, a little over 58 percent or 1,380 carlots moved as table stock to the fresh market, almost 42 percent, or 972 carlot to processors.

"Reds" to Fresh Market and to Processors: The ratio was almost eight to over two. Of total shipments of "Reds" at 1,725 carlots, about 78 percent or 1,350 carlots moved as table stock, about 22 percent or 375 carlots moved to processors.

"Whites" to Fresh Market and to Processors: Only about 28 carlots of White varieties moved to the fresh market, much below the previous season, 597 were to processors, total 628.

All of the above figures on shipments have been calculated on the best information available, and may not be as exact as the figures indicate.

Prices: A factor in the price structure for new early season potatoes is the report of storage stocks of old crop potatoes. As of February 1, 1970, the total was 105.6 hundredweight, one percent above that of a year earlier. There was a good disappearance in February and the stock on hand as of March 1, 1970, were 81.9 million hundredweight - six percent below that of March 1, 1969.

F.O.B. prices for table stock for the 1970 season were higher than in the previous season, and unique in that the same price - $3.00-3.10 prevailed for most of the season - for about 5½ weeks of the eight week season. This is for 50-lb. sacks of LaSodas and LaRouge US One Size A. The price dropped to $2.75-3.10 from April 9 through April 13, but advanced thereafter, reaching $3.00-3.25 in the last week of April. For Size B the price was $3.00-3.10 for the first three weeks of the season, mostly $2.75-3.10 for the next three weeks, then advanced, winding up at $3.00-3.25 in the last week of the season.

In the 1969 season, U.S. One Size A and B LaSodas and La Rouge ranged $2.00-2.60 for most of the season, dropping to $1.75-2.25 in the first week of May.

No f.o.b. prices were reported in the 1970 season for "Whites" for the table market as offerings were very limited.

Prices to chippers for LaRouge and LaSodas ranged mostly $5.00-5.10 bulk per hundredweight, except for $5.50-5.60 for a few loads early in the season. An extra 15-25 cents per hundredweight was charged for sacking, which was in 50-lb. sacks.

Most of the "Whites" moving to chippers were on pre-season contracts ranging from $3.35-3.85 per cwt. Many growers had difficulty filling their contracts on account of low yields. The relatively small portion moving on the open market was at $5.75-6.00 bulk per cwt., except for a very few early in the season at $7.85. When sacked, prices were slightly higher.

Varieties: Only two Red skin varieties were produced in the 1970 season - LaRouge and LaSodas, mostly LaRouge. The principal variety of "Whites" was the LaChipper, with some Kennebecs and Norchips.

The trend has been toward increased plantings of "Whites" in Dade County. This is for attracting more of the chip trade to the area. Certain White varieties chip better than Reds. Interest continues toward finding better White varieties suitable for chipping in this area. Chipping quality of Red varieties is generally not reliable, at times acceptable, at other times not.

Washing: All table stock was washed, but only a portion - less than half of that going to processors. The trend has been away from washing stock moving to processors.

Bulk Loading: This has increased as more shippers arranged facilities for bulk loading, which cuts handling cost for shippers as well as chippers in unloading. About one-half to two-thirds of movement to chippers was in bulk, none in bulk for the fresh market. A few seasons ago there were a few experimental bulk loads of table stock.

Grading and Inspection: All table stock was graded, and most was Federal-State inspected. Of stock moving to processors only minimum grading was necessary, as quality was good, and most potatoes met processors minimum requirements of 85 percent U.S. One size A with little or no grading. Very little stock to processors was inspected.

Consumer Packs: There was less volume of 5 and 10 lb. sacks in master containers packed than in the previous season. Only two shippers packed "consumer" packs on a regular basis, a few others only on occasions.

REVIES OF THE 1970 HASTINGS, FLORIDA POTATO SEASON

W. H. Crocker - Local Representative

The start of the Hastings' shipping season was delayed two to three weeks this year because of adverse weather early in the growing season. Heavy rains washed out a substantial part of the acreage, and replanting was necessary. Cold weather shortly afterward retarded growth of much of the crop. The result was a late harvested crop that did not have the usual spread in dates of maturity. Most of the crop was moved in about six weeks compared with the usual ten-week season of the most recent years.

Digging started during the week of April, but was very light during that week and the next. Movement during this period was practically all to processors, and mostly on contract. Sales on the open market during this time were mostly on the basis of $5.10 per bulk hundredweight for 80 to 85 percent U.S. One quality, 1 5/8 inch minimum. As offerings increased near the end of April, this price dropped to 4.10 and then in early May to $3.35.

Table stock began to move the first week of May, and with demand most often in excess of the light offerings with the market holding around 4.00 per cwt f.o.b. Open market offerings to processors decreased sharply. Very few open market sales to processors were reported to Market News between May 4 and May 20. Meantime, the table stock market for "Round White" types held in the narrow range of $3.75 to $4.00 throughout the period. During the peak of the harvest, the price was generally reported at $3.75 per cwt f.o.b., but as the deal drew to its close early in June, the price rose again to the $4.00 level with expectations that the light remaining offerings would bring somewhat higher prices.

The range prices for "Round Reds" were somewhat higher under the pressure of competing areas. Early sales of Red types were on the basis of $5.50 per cwt f.o.b., but after two weeks market decline brought the price down to $3.75, where it stayed until the Hastings' supply ran out near the end of May.

Florida shippers estimated that about twenty-five percent of this year's crop of White potatoes were marketed for table stock, compared with the ten to fifteen percent which has been usual in recent years. F.O.B. prices for this season's crop were the highest, on average, since the 1965 crop. However, because of the replanting and refertilizing necessary, it was a very expensive crop to grow.

****

REVIEW OF THE 1970 NORTHEAST ALABAMA POTATO SEASON

William H. Cosper - Local Representative

SAND MOUNTAIN AREA

According to the Crop Reporting Board, the acres harvested in Northeast Alabama during 1970 was 8,900 acres as compared with 9,000 the previous year. The acreage in this area was about 60 percent Round White Varieties and 40 percent Round Red Varieties. The main White Varieties were LaChippers and Superiors. The principal Red Variety was LaSoda. Most of the Round Whites moved to chippers; however, due to high prices a larger than normal volume of Round Whites were sold as table stock. Light harvest and shipping began the week of June 22, with good volume moving by June 26. This area, like South Alabama, enjoyed the highest f.o.b. prices in recent years.

From the beginning and through most of the volume movement of the season, the f.o.b. price for Round Reds was $5.25 and Round Whites $4.75. Near the end of the season Round Reds declined to $4.00-4.25 with most Round Whites moving to chippers on contract.

REVIEW OF THE 1970 ELIZABETH CITY, NORTH CAROLINA POTATO SEASON

Ace W. Gloe - Local Representative

Eastern North Carolina had the best shipping season since 1965 from the standpoint of fast movement of the crop, and reasonably good prices. Early offerings in the southern part of the area were mostly on contract to processors. Very little table stock was offered before the week of June 16, at which time the market for U. S. No. 1 Size A Round White potatoes was reported at $4.50-5.00. In the following week, the price declined to $4.25, as Virginia began marketing its Eastern Shore potato crop. This price held for slightly more than two weeks, then, as the Eastern Shore deal reached its peak, North Carolina potatoes sold for $4.00. This $4.00 price held until the Elizabeth City office closed on July 14.

Offerings of Round Red potatoes were very light this past season. Prices for the available few generally were quoted at $4.75 to $5.25 per CWT.

Open market prices of potatoes for processing were correspondingly high with sales generally at the $3.50 to $4.00 level for 85 percent U. S. No. 1 quality bulk per CWT, during the first two weeks that the Elizabeth City office was open. The price held at $3.50 from June 24 through July 4, then declined steadily until the office closed. This $3.50 price was very near pre-season contract levels.

Daily shipments reported to Market News indicated that, during the first two weeks of the deal, shipments to processors accounted for about 85 percent of the movement. During the last three weeks that the office in Elizabeth City gathered shipment records, table stock accounted for about half the movement. When the office closed on July 14, it was estimated that less than 10 percent of the crop remained to be harvested, and mostly all were under contract.

****

REVIEW OF THE 1970 FOLEY, ALABAMA POTATO SEASON

William H. Cosper - Local Representative

SOUTH ALABAMA

The total acres harvested for South Alabama in 1970 was 7,900 acres as compared with 10,500 acres in 1969. The crop consisted of about 60 percent Red Varieties and 40 percent White Varieties. Red LaSodas were the principal red variety, and Superiors were the main white variety.

Harvesting and shipping operations began the week of May 13, delayed almost from the beginning by rain. The rainfall delayed the beginning of harvest but was beneficial to the crop. Rain and wet fields delayed harvest again from about June 1 to 7.

From the standpoint of price, 1970 was one of the most successful seasons in recent years. The season began with the f.o.b. price for Round Reds at $4.25 and Round Whites at $3.50-3.75. By mid-season the price had increased to $4.75 for Reds and $4.00-4.50 for Whites. Before the end of the season, Round Reds were $4.75-5.00 and Round Whites were $4.50-5.00.
